

To whom it may concern:

This letter is to implore our county and city government for help in curing the sand intrusion to Johns pass. This sand is causing major safety, drainage, parking, accessibility and hinderances to all the businesses in Johns Pass Village. Below you will find the issues, causes and solutions to this problem along with the businesses and businesses who are impacted by this issue.

Main issues the sand causes:

1. Safety
2. Bridge erosion
3. Drainage to property surrounding our business and gulf Blvd
4. New beach draws crowds taking parking away from guests trying to spend money in the pass
5. Accessibility to the pass – sand will close access to the pass if not monitored
6. Accessibility to Johns pass village docks
7. Johns pass is in dire need of transient slips which could be provided if issue is solved
8. Need room for Johns Pass village to grow

What caused these issues:

1. Sand moving naturally from north to south
2. Some city municipalities removing beach groins over last three decades
3. Some cities beach groin maintenance not being done, these must be reinforced as beach grows.
4. South jetty of Johns Pass lengthened, and north Jetty not touched which essentially just allows all sand to be caught and deposited inside the pass.

**NEED** -> Permanent fix to these issues:

1. City municipalities north of Johns Pass must reinforce current beach groins and replace the ones that have been removed over the past decades.
2. The north jetty of Johns pass must be secured and lengthened to stop future intrusion
3. Add a jetty running parallel to the west side of Johns Pass bridge would ensure no future problems occur along the boardwalk businesses.
